

Platform

eca Straight Stairlifts are available with platform sizes ranging from 600mm x 750mm to a maximum of 1000 x 800mm. The slip resistant surface of the platform ensures safe entry & exit of the lift. This surface is easy to clean allowing any water to drain off the platform.

The platform can take up to a maximum of 250kg (39 stone), 1 wheelchair user. The lift has automatic platform & barrier arms as standard, thus ensuring easier operation and independence for the user.

Lift Configuration

Lifts can be supplied with a straight through entry/exit, adjacent entry/exit or same side entry exit configuration. See the standard layout drawings for further information.

Suitable for internal and external applications, wall or stanchion mount fixing.

Side Access

A side access platform is recommended for a stair with less than 3m of access at the lower landing.

This option ensures that the user has sufficient room to manoeuvre on and off the platform safely. This is an optional extra that can be added onto your quotation.

All platforms are fitted with a pressure sensitive under tray and access ramps to stop the lift should it meet any obstruction on the stairs. These operate to prevent any damage to an obstruction or injury to people.

Operating Controls

A battery operated lift with both upper and lower level charging points and fully automatic platform and barrier arms. Radio controlled with barrier arms folding down allowing for travel on low ceilinged staircases.

If there should be an emergency, which is not apparent to the operator any one of the red emergency stop buttons can be pushed to halt the lift.
