

# eca VERTICAL MINI SIRIO ENCLOSURE LIFT

## GENERAL INFORMATION

1

### ■ Platform

eca Mini Sirio Vertical Enclosure lifts are a solution for use internally or external to a building and are available with platform sizes ranging from 600mm x 600mm to a maximum of 1.75m<sup>2</sup>.

An access solution for use both internal and external to a building with a maximum travel of 10 metres, 7 stops and an extensive list of finishes and options combine to make the Mini Sirio a versatile choice.

A non-slip surface on the platform ensures safe entry & exit of the lift. This surface is easy to clean allowing any water to drain off the platform. The platform can take up to 250kg (32 stone), 1 wheelchair user and 1 attendant.

### ■ Lift Configuration

Lifts can be supplied with a straight through entry/exit, adjacent entry/exit or same side entry exit configuration. Installed within a shaft built by others or with its own enclosure, a 120mm pit or ramped.

### ■ Doors

Lifts supplied with a full height door at the lower level and half height gate/door at upper level. The standard door is a two-panel clear glazed aluminium door and frame in an oxide black or silver anodised finish, (other RAL colours are also available) with manual opening, and spring closing.

## ■ Call Controls

Lifts are controlled from the using "constant pressure" controls (as per the proposed European Standard ISO 9386/1).

Should a problem occur or should the passenger feel uncomfortable, the lift will stop when pressure is no longer applied.

## ■ Alarm & Battery Back-up

An alarm can be activated by the user should any problem occur. While the lift is in use - if there is any problem with the power supply the battery will ensure that the lift will continue to the lower level and the user can exit the lift safely.

Braille buttons.
